

# GFG Alliance

A mining business with a global reach

Only  
Australian iron ore  
miner to produce  
lump, fines,  
concentrate and pellet

From pit to port  
Fully integrated, private supply chain

Middleback  
ranges  
Birthplace of the  
Australian Steel Industry  
- mining since the 1890's

2 mtpa  
of coking coal for  
internal and external  
customers

**The GFG Alliance supplies raw materials into the integrated supply chain as well as to external customers. The Alliance currently produces approximately 13m tonnes of iron ore and metalurgical coal per annum.**

Its iron ore mining business operates primarily in the Middleback Ranges, located 60 kilometres from the integrated Whyalla Steelworks. The operation incorporate the Iron Baron, Iron Knob and South Middleback Ranges mine sites. They mine hematite iron ore, which is exported mainly for an Asian customer base, and magnetite iron ore, which is used in the Whyalla steelworks.

The Alliance also owns a portfolio of non-ferrous mining assets located in South Australia. This includes Ardrossan Dolomite Mine, which supplies dolomite flux to the Whyalla Steelworks, as well as a collection of copper-gold exploration projects.

GFG Also owns and operates the Tahmoor coking coal mine in New South Wales in Australia. With an annual production of two million tonnes per annum, the bulk of its products are used for primary steel making in blast furnaces both in Australia and Internationally.
